# Take your content delivery to a higher level with CDN services

Especially designed to enhance speed of content delivery, CDN appears to be the solution for every business. Nowadays, when every second matters in competition, it is vital to be ahead.

## Our CDN solutions:

- ✓ Cover 99% of the world with different packages.
- ✓ Use Anycast to make service even better.
- ✓ Have free testing period (agreed at request).
- ✓ Support http/2.
- ✓ Support SSL/HTTPS.
- ✓ Deliver your content and blazing fast speeds all over the world.
- ✓ Get your website higher ranking in Google (SEs like higher speeds).
- ✓ Provide anti-hotlink measures.
- ✓ Provide HLS, DASH support.
- ✓ Allow flexible setup.

# Why use CDN

## CDN helps to:

**Make your business more stable and prone to downtime.** Your static resources will always be delivered from next best node and users will not see any degradation of services;

**Reduce load on your server.** Your origin (the server where the original content resides) gets much less requests, this leads to load reduction on main server.

**Increase loading speed.** CDN has many Points of Presence (PoPs) which are extremely fast. The content is loaded much faster and this is useful for user experience and ranking.

**Distribute big content** (large files).

**Gain easy scalability** – expand your business without hassle.

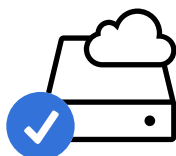

## CDN good for:

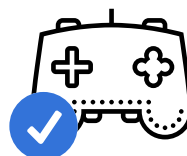

Ecommerce

VOD and live streaming

Distribution of large files

Gaming

Personal websites

Most of offered CDN solutions have useful personal cabinet with vital stats at your disposal and API for integration.
