INXY HOSTING
MARKET

Intellectual property needs to be protected

Protect from piracy with DRM (Digital Rights Management) technologies. We offer both – DRM for live streaming and DRM for VOD content.

DRM can be used with conversion

SCTE-35 supported for personified ads

We support

Fairplay

Apple, + AES-128

PlayReady

Microsoft

Widevine Modular DRM

Google

What is multi-DRM?

Multi-DRM allows to restrict different actions that can be performed to video, i. e., copying, modification or viewing.

Special key, generated at purchase, are used to decrypt content. This means that such protection cannot be broken.

Even if user purchases access to your content, this access is limited – for example, copying or modifying are not allowed.

Invest in your protection now with advanced multi-DRM technologies.
